

### **Boot 1**

Test the battery and AC adapter together to verify the laptop properly powers on. During this boot, the battery will be charging.

### **Boot 2**

Test the battery and AC adapter together to verify the laptop properly powers on. During this boot, the battery will be charging.

### **Boot 3**

Test the battery only to verify the suspect properly powers on. This boot should have a battery that is charged enough to allow a Windows test to take place without the battery dying.
